

one trainable gate:
the ordered 15-rotation Pauli word

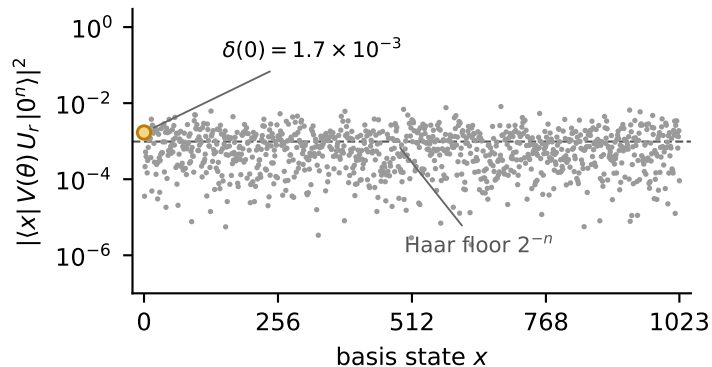

$$R_Q(\theta) = e^{-i\theta Q/2}; \quad V(0) = \text{identity}$$

$$\delta(\theta) = |\langle 0^n | V(\theta) U_r | 0^n \rangle|^2$$

$(\tau_r, \tau_p) = (n, n/2)$, drawn at $n = 10$

$\theta = 0$: the scrambled state $U_r | 0^n \rangle$
